The present invention relates to nucleic acid molecules which modulate the synthesis, expression and/or stability of Hepatitis C virus (HCV) or Hepatitis B virus (HBV) RNA. The nucleic acid molecules include antisense and enzymatic nucleic acids such as hammerhead ribozymes, DNAzymes, inozymes, zinzymes, amberzymes, and G-cleaver ribozymes. Also disclosed are nucleic acid decoy molecules and aptamers that bind to HBV reverse transcriptase primer sequences, as well as oligonucleotides that specifically bind the Enhancer I region of HBV DNA. The nucleic acids may be used to modulate the expression of HBV genes and HBV viral replication. Also disclosed is a method for screening compounds and/or potential therapies directed against HBV, and compounds that modulate the expression and/or replication of HCV. The compounds and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      amberzyme; G-cleaver ribozyme; decoy molecule; aptamer;

Also disclosed are nucleic acid decoy molecules and aptamers that bind to HBV reverse transcriptase primer sequences, as well as oligonucleotides that specifically bind the Enhancer I region of HBV DNA. The nucleic acids may be used to modulate the expression of HBV genes and HBV viral replication. Also disclosed is a method for screening compounds and/or potential therapies directed against HBV, and compounds that modulate the expression and/or replication of HCV. The compounds and disease states the invention are useful for the treatment of degenerative and disease states related to HBV and HCV infection, replication and gene expression such as cirrhosis, liver failure, and hepatocellular carcinoma. The present sequence represents a substrate for one of the HCV DNAzyme or minus strand DNAzyme sequences disclosed in the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             anticonvulsant; antiparkinsonian; cerebroprotective; antimigraine;

                                                                                                                                                                                           The
                                                                                 is an aminoprocollage processing. ADAMTS14
                                 present sequence is that of the 3' acceptor splice site of exon 13 of over human A Disintegrin and Metalloproteinase with Thrombospondin or repeats (ADAMTS) gene, denoted ADAMTS14, on chromosome 10q213. A A sequence for ADAMTS14 is given in ACC58643. ADAMTS14 (see ABR42736) an aminoprocollagen peptidase that functions in procollagen cessing. ADAMTS14 polynucleotides, polypeptides, vectors, cells nsfected by the vectors, and inhibitors directed against ADAMTS14 are d in the treatment and/or prevention of a range of diseases
                                                                                                                                                                                                                                  67pp; English.

New useful e.g. polypeptide nucleic acid encoding human property for treatment of tumors and antibodies. prostate membrane-specific antigen, mors and viral infection, also relat related

Disclosure; Page 327; 771pp; French.

The invention relates to the isolation of 6327 nucleotide sequences, a fragments of at least 15 consecutive nucleotides of these nucleotides, a sequence having at least 80% identity, after optimal alignment, with the nucleotides, a sequence that hybridizes under stringent conditions with the nucleotides, or the complement, or corresponding RNA, of the nucleotides are used as probes or primers for detecting, identifying, quantifying and/or amplifying nucleic acides, as in vitro sense and antisense sequences, of nucleotides involved in tumour suppression or reversion, apoptosis and or viral resistance, to produce

The nuclectides (also vectors containing them and cells containing the vectors), the encoded polypeptides and antibodies (Ab) against the polypeptide are useful for prevention and/or treatment of viral infections or diseases characterized by development of tumours or cell degeneration (e.g. Alzheimer's disease or schizophrenia).

Analysis of the expression of the nucleotides can be used for diagnosis and/or prognosis of these diseases. The nucleotides and polypeptides can also be used to screen for their specific interactive molecules, potentially useful for treating diseases associated with abnormal expression of the nucleotides.

molecule encoding human inhibitor-kappa B-R (also known as I-kappaBR, IKRR, I-kappa-B-related, ikappab r, nuclear factor of kappa light polypeptides gene enhancer in B-cells inhibitor-like 2 and NFKBIL2) to inhibit its expression. Antisense compounds of the invention are useful for treating diseases or conditions associated with the expression of inhibitor-kappa B-R such as a heightened immune response involving increased cytokine expression, or a result of infection (e.g. bacterial, vital or parasitic). They are useful for diagnostics, therapeutics, prophylaxis e.g. to prevent or delay infection, inflammation or tumour formation, as research reagents and kits and in distinguishing between functions of various members of a biological pathway. They are also useful in antisense therapy. The present sequence is an oligonucleotide targetted to human inhibitor-kappa B-R DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                    Example 15; Page 75; 108pp; English

Novel genetic variants of acid phosphatase 2, lysosomal pouseful in studying expression and function of the protein, screening drugs to treat diseases e.g. Hodgkin's disease. polypeptide in, and for gene

Page 14; 109pp; English.

The invention comprises the human lysosomal acid phosphatase 2 (ACP2) nucleic acid and protein sequences. Specifically, the invention relates to the discovery of 22 novel polymorphic siteally, the APC2 gene. The invention also comprises methods for haplotyping and genotyping the ACP2 gene in an individual. The ACP2 gene (located on chromosome 11) encodes a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                lysosomal-specific enzyme that catalyses the hydrolysis of corthophosphoric monoesters to alcohol and phosphate. The ACP2 gene and protein are pharmaceutically important in the treatment of Hodgkin's disease (HD) and acid phosphatase deficiency. The novel ACP2 gene polymorphisms of the invention are useful in haplotyping the ACP2 gene. ACP2 haplotyping is useful in validating ACP2 as a target (and designing drugs) for treating an ACP2-related disease or condition (e.g. Hodgkin's disease and acid phosphatase deficiency). The ACP2 gene polymorphisms are useful for ACP2 genotyping, which can also be used to develop diagnostic tests and therapeutic treatments. The ACP2 protein and nucleic acids of the invention are useful in the production of a transgenic animal which expresses ACP2 protein. The ACP2 nucleic acids of the invention are useful in the production of a transgenic animal which expresses ACP2 protein. The ACP2 nucleic acids of the invention are useful in the production of a lele-specific oligonucleotides designed to genotype each of the ACP2 polymorphisms. Nucleic acids ABL36320 represent claimed ACP2 allele-specific probes. Nucleic acids ABL36321-ABL3636-BL36408 represent claimed ACP2 allele-specific propers. Nucleic acids ABL36321-ABL3636-BL36408 represent claimed ACP2 primers. Nucleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches

```

Ś B

The invention comprises the human lysosomal acid phosphatase 2 (ACP2) nucleic acid and protein sequences. Specifically, the invention relates to the discovery of 22 novel polymorphic sites within the APC2 gene. The invention also comprises methods for haplotyping and genotyping the ACP?

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC lysosomal-specific enzyme that catalyses the hydrolysis of CC lysosomal-specific enzyme that catalyses the hydrolysis of CC orthophosphoric monoesters to alcohol and phosphate. The ACP2 gene and CC protein are pharmaceutically important in the treatment of Hodgkin's CC disease (HD) and acid phosphatase deficiency. The novel ACP2 gene and CC polymorphisms of the invention are useful in haplotyping the ACP2 gene. CC ACP2 haplotyping is useful—in validating ACP2 as a target (and designing CC drugs) for treating an ACP2-related disease or condition (e.g. Hodgkin's CC disease and acid phosphatase deficiency). The ACP2 gene polymorphisms are cc disease and therapeutic treatments. The ACP2 protein and nucleic acids of the invention are useful in the production of a transgenic animal which cat expresses ACP2 protein. The ACP2 protein and nucleic acids of the invention are useful in the production of a transgenic animal which expresses ACP2 protein. The ACP2 notein and nucleic acids of the invention are useful in the production of a transgenic animal which cat expresses ACP2 protein. The ACP2 notein and nucleic acids of the invention are useful in the production of a transgenic animal which capacitype each of the ACP2 polymorphisms. Nucleic acids ABL36321-CC animed ACP2 allele-specific probes. Nucleic acids ABL36321-CC ABL36364 represent claimed ACP2 allele-specific PCR primers. Nucleic acids ABL36321-des ABL36335-ABL36408 represent claimed ACP2 primer-extension
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                                                                                                                                                                                         á
                                                                                                                                                                                                                                                                                                                                                                The present sequence represents a preferred target sequence for an enzymatic nucleic acid (i.e. a ribozyme) which cleaves relA mRNA at the nucleotide base position indicated in the DE line. The relA gene product is a subunit of the transcriptional regulator NF-kappaB and is implicated specifically in the induction of inflammatory responses. Regions of the mRNA that do not form secondary folding structures and that contain potential hammerhead and hairpin ribozyme cleavage sites were identified by computer analysis. Ribozymes directed against these mRNA sequences were designed and synthesised with modifications that improve their nuclease resistance. The ribozymes are designed to cleave the target stepences and thereby inhibit relA expression, making them potentially useful for treating rheumatoid arthritis, restenosis and asthma as well as for increasing tolerance to transplanted trissues. The potential immunosuppressive properties of a ribozyme that cleaves relA mRNA means that uses are limited to local delivery, acute indications or ex vivo
                                                                                                                                                                                                                                                                                                        Matches

```
CC phosphorodithioate, phosphoramidate or phosphoromidities group, OR1, SR1, CC an optionally substituted or modified nucleotide (N'), or an CC oligonucleotide of formula (N')gR2; g = 1-200; R1 = a protecting group; CC R2 = an H-phosphorame, alkanephosphonate, phosphortsetter, phosphite CC R2 = an H-phosphoramidate or phosphoramidate, phosphorodithioate, CC phosphoramidate or phosphoramidite group, OH, OR1, SR1 or CC phosphoramidate or phosphoramidite group, OH, OR1, SR1 or CC phosphorate, alkanephosphonate, phosphorothioate, phosphorate are compounds of formula CC groups and the group. Also mentioned are compounds of protecting group; and R4 = OH or an H-CC phosphorate, alkanephosphonate, phosphoratister, phosphoramidate group. Also claimed are new phosphoramidates, a grocess for preparing an oligonucleotide 5'-phosphate, a process for proparing an oligonucleotide 5'-phosphate, a process for preparing an oligonucleotide 5'-phosphate, a process for preparing an oligonucleotide 3'.5'-diphosphate. The CC proparing or -binding agents. The process for preparing or joingonucleotide of cleaving or -binding agents. The process for preparing oligonucleotide CC 1,5'-diphosphates is simple and suitable for use in automatic DNA CC genome, used to describe the method of the invention. (Updated on 16-OCT-CC 2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Derivatised solid supports and reagents for oligo:nucleotide synthesis and new oligo:nucleotide phosphoramidate conjugates.

                                                                                                                                                                                                                                                                 Ś
                                                                                                                                                                                                                                                                                                                                                                        Bacteriophage lambda N protein residues 1-19, is an arginine rich RNA CD binding peptide (RBP) specific to the bacteriophage lambda box B, RNA binding site, i.e. the present sequence. It was used in a novel screening method, which comprised the construction of a vector encoding a hybrid protein, in which the 19 residue amino-terminal RBP of the phage lambda N protein was replaced by an arginine rich putative RBP. A second vector encoding the phage lambda termination site Nut and a marker gene was constructed, into which oligonucleotides containing box A of the Nut site and the appropriate RNA hairpin in place of box B were cloned. Plasmids were transformed into E. coli, and the expression of the reporter gene determined, showing that anti-termination was observed only with specific peptide/RNA interactions. The method can be used to isolate RBP, useful in therapy to block the life cycle of pathogenic microorganisms including viruses, e.g. HTV, and bacteria. The RBP can also be used to treat mammalian diseases resulting from impairment or loss of a natural RBP, as lead compounds for the development of the rapeutic compounds and in
                                                                                                                                                                                                                                                                                            Matches

                                                                                                                                               The present invention describes a branched composition (I) which is useful for improving the solubility of synthetic polymers (II) or all minimizing or eliminating self-aggregation of (II), where (II) is a nucleic acid (or analogue), peptide, peptide nucleic acid (PNA), polymenta or a linked polymer. Modification of (II) by (I) facilitate synthesis, purification and analysis of many insoluble polymers, and particularly purine-rich PNA polymers labeled with hydrophobic labels. The products can be used in research, diagnostic therapeutic applications. The present sequence represents a PNA used the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                     Branched compositions for improving the solubility of synthetic polymers or minimizing or eliminating polymer self-aggregation, particularly in peptide nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WO9937670-A1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to a method for ameliorating the effects of skin disorders. The method comprises contacting the skin with an antisense oligonucleotide, (for Insulin-like Growth Factor [IGF]-1 receptor, IGF binding protein [IGFP]-2 or IGFBP3), which is capable of inhibiting or reducing growth factor mediated cell proliferation, inflammation and/or other disorders. The present sequence is an oligonucleotide which can be used to design the antisense oligonucleotides of the present invention (see ARP45151 and ARF45153-0)igonucleotides of the present invention (see ARP45151 and ARF45153-1) The method is useful for ameliorating the effects of psoriasis, inhthyosis, pityriasis, ruba, pilaris, serborrhoea, keloids, keratosis, neoplasias, scleroderma, warrs, benign growths, cancers of the skin, a hyperneovascular condition such as a neovascular condition of the retina, brain or skin, growth factor-mediated malignancies, other sclerotte disease, kidney disease, hyperproliferation of the inside of blood
                                                                                                                                                                                                                                                       Antisense therapy; antiproliferative; antiinflammatory; antipsoriatic; cytostatic; dermatclogical; cardiant; virucide; ophthalmological; keloid; skin disorder; Insulin-like Growth Factor 1 receptor; IGF-1; pityriasis; IGF binding protein; IGFBP-2; IGFBP3; inflammation; psoriasis; pilaris; growth factor mediated cell proliferation; ichthyosis; serborrhoea; ruba; keratosis; neoplasia; scleroderma; wart; skin cancer; sclerotic disease; hyperneovascular condition; hyperplasia; kidney disease; neovascular condition of the retina; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                skin disorders. The method comprises contacting the skin with an antisense oligonucleotide, (for Insulin-like Growth Factor [IGF]-1 receptor, IGF binding protein [IGFBB]-2 or IGFBB]/, which is capable of inhibiting or reducing growth factor mediated cell proliferation, inflammation and/or other disorders. The present sequence is an oligonucleotide which can be used to design the antisense oligonucleotides of the present invention (see AAF45151 and AAF45153-IF45161). The method is useful for ameliorating the effects of psoriasis, ichthyosis, pityriasis, ruba, pilaris, serborrhoea, keloids, keratosis, neoplasias, scleroderma, warts, benign growths, cancers of the skin, a hyperneovascular condition such as a neovascular condition of the retina, residence is the skin and recomplete in the skin and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       brain or skin, growth factor-mediated malignancies, other sclerotic disease, kidney disease, hyperproliferation of the inside of blood vessels or any other hyperplasia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ameliorating the effects of a disorder, e.g. psoriasis, by administering UV (ultra-violet) treatment (optional) and an antisense nucleic acid that inhibits or reduces growth factor mediated cell proliferation and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   30-MAR-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAF45184 standard;

The method comprises contacting the skin with an tantisense oligonucleotide, (for Insulin-like Growth Factor [IGF]-1 receptor; IGF binding protein [IGFBP]-2 or IGFBP]), which is capable of inhibiting or reducing growth factor mediated cell proliferation, inflammation and/or other disorders. The present sequence is an oligonucleotide which can be used to design the antisense oligonucleotides of the present invention (see AAF45151 and AAF45153-6151). The method is useful for ameliorating the effects of psociasis, ichthyosis, pityriasis, ruba, pilaris, serborrhoea, keloids, keratosis, neoplasias, scleroderma, warts, bening growths, cancers of the skin, a hyperneovascular condition such as a neovascular condition of the retina, brain or skin, growth factor-mediated malignancies, other sclerotic disease, kidney disease, hyperproliferation of the inside of blood vessels or any other therefore.
                                                                                                                                                                                                                                                                           Antisense therapy; antiproliferative; antiinflammatory; antipsoriatic; cytostatic; dermatclogical; cardiant; virucide; ophthalmological; keloid; skin disorder; Insulin-like Growth Factor 1 receptor; IGF-1; pityriasis; IGF binding protein; IGFBP-2; IGFBP3; inflammation; psoriasis; pilaris; growth factor mediated cell proliferation; lohthyosis; serborrhoea; ruba; keratosis; neoplasia; seleroderma; wart; skin cancer; sclerotic disease; keratosis; neoplasia; scleroderma; wart; skin cancer; sclerotic disease; hyperneovascular condition; hyperplasia; kidney disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ameliorating the effects of a disorder, e.g. psoriasis, by administering UV (ultra-violet) treatment (optional) and an antisense nucleic acid tha inhibits or reduces growth factor mediated cell proliferation and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 15

                                         The present invention relates to a method for ameliorating the effects of CC skin disorders. The method comprises contacting the skin with an CC antisense oligonucleotide, (for Insulin-like Growth Factor [IGF]-1 CC receptor, IGF binding protein [IGFBP]-2 or IGFBP3), which is capable of inhibiting or reducing growth factor mediated cell proliferation, CC inflammation and/or other disorders. The present sequence is an CC oligonucleotide which can be used to design the antisense CC oligonucleotides of the present invention (see ARP45151 and ARF45153-CC oligonucleotides of the present invention (see ARP45151 and ARF45153-CC oligonucleotides of the present invention (see ARP45151 and ARF45153-CC oligonucleotides, ruba, pilaris, serborrhoea, keloids, keratosis, CC inthyposis, pityriasis, ruba, pilaris, serborrhoea, keloids, keratosis, CC neoplasias, scleroderma, warts, benign growths, cancers of the skin, a CC hyperneovascular condition such as a neovascular condition of the retina, CC disease, kidney disease, hyperproliferation of the inside of blood coversels or any other hyperplasia

MURDOCH CHILDRENS RES INST

ر د Werther GA, Edmondson

Ameliorating the effects of a disorder, e.q UV (ultra-violet) treatment (optional) and inhibits or reduces growth factor mediated e.g. psoriasis, and an antisense ted cell prolifer by administering nucleic acid that ration and/or

inflammation

present invention relates to

method for ameliorating the effects

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   oligonuclectides of the present invention (see AAF45151 and AAF45153-F45161). The method is useful for ameliorating the effects of psoriasis, ichthyosis, pityriasis, ruba, pilaris, serborrhoea, keloids, keratosis, neoplasias, scleroderma, warts, benign growths, cancers of the skin, a hyperneovascular condition such as a neovascular condition of the retina, brain or skin, growth factor-mediated malignancies, other sclerotic disease, kidney disease, hyperproliferation of the inside of blood
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              skin disorders. The method comprises contacting the skin with an antisense oligonuclectide, (for Insulin-like Growth Factor [IGF]-1 receptor, IGF binding protein [IGFBP]-2 or IGFBP), which is capable of inhibiting or reducing growth factor mediated cell proliferation, inflammation and/or other disorders. The present sequence is an oligonucleotide which can be used to design the antisense
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Antisense therapy; antiproliferative; antiinflammatory; antipsoriatic; cytostatic; dermatological; cardiant; virucide; opthalmological; keloid; skin disorder; Insulin-like Growth Factor 1 receptor; IGF-1; pityriasis; IGF binding protein; IGFBP-2; IGFBP3; inflammation; psoriasis; pilaris; growth factor mediated cell proliferation; ichthyosis; serborrhoea; ruba; keratosis; neoplasia; scleroderma; wart; skin cancer; sclerotic disease; hyperneovascular condition; hyperplasia; kidney disease; neovascular condition of the retina; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    30-MAR-2001

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to a method for ameliorating the effects of skin disorders. The method comprises contacting the skin with an antisense oligonucleotide, (for Insulin-like Growth Factor [IGF]-1 receptor, IGF binding protein [IGFBP]-2 or IGFBP]), which is capable of inhibiting or reducing growth factor mediated cell proliferation, inflammation and/or other disorders. The present sequence is an oligonucleotide which can be used to design the antisense ARF451S1 and ARF451S3-qligonucleotides of the present invention (see ARF451S1 and ARF451S3-pligonucleotides of the present invention (see ARF451S1 and ARF451S3-inhthyosis, pityriasis, ruba, pilaris, serborrhoea, keloids, keratosis, inhthyosis, pityriasis, ruba, pilaris, serborrhoea, keloids, keratosis, ruba, pilaris, serborrhoea, 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         29-MAY-2001;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 15 BP; 4 A; 2 C; 9 G; 0 T; 0 U; 0 Other;
The invention relates to a novel short interfering RNA (siRNA) nucleic acid molecule or an enzymatic nucleic acid molecule, that modulates expression of a nucleic acid molecule encoding HER2, K-Rass, H-Ras, N-Ras human immunodeficiency virus (HIV) or a component of HIV. The nucleic acid molecule of the invention has cytostatic, anti-HIV, and anti-rheumatic activity. The nucleic acid molecules are useful for reducing HER2, K-Ras, and HIV activity in a cell. The nucleic acids are also useful for treating breast, ovarian, colorectal, lung, prostate,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; ribozyme; short interfering RNA; siRNA; HER2; K-Ras; enzymatic nucleic acid; H-Ras; N-Ras; HIV; cytostatic; anti
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human HER2

                                                                                The invention describes adaptor molecules, where each end of the adaptor is compatible with a nucleic acid digested with a restriction enzyme or a nucleic acid comprising an end that is compatible with a nucleic acid digested with a restriction enzyme. The adaptor molecules, compositions, kits and arrays are useful for cloning nucleic acid molecules that does not require the design and synthesis of oligonucleotides or PCR primers. The adaptors, kits and arrays are also useful for ligating two ends of a single nucleic acid molecule, or ligating two or more nucleic acid molecules. The kits can also be used for performing internal deletion molecules are ligated to a cloning vehicle, making the cloning procedure more rapid and efficient, and less error-prone. This sequence represents a nucleic acid cloning associated adaptor molecules.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ACD82534 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an oligonucleotide primer capable of specifically hybridising to a DNA having the sequence of the flanking regions of a microsatellite selected from M2-4-9, M2-2-12, M2-3-11, M2-2-20, M2-2-21, M2-2-22, M2-2-23, M2-2-24, M2-4-25, M2-4-26, M2-2-29, M2-2-32, M2-4-33, M2-4-37, M2-2-24, M2-4-26, M2-5-11, M2-2-46, and M2-2-48. The primer is useful for determining the number of repeat units of the microsatellite cited above. The primer is useful in HLA-related research, such as genetic mapping of HLA class II-associated diseases, transplantation matching, population genetics, and identification of recombination hot spots as well as linkage disequilibrium studies. The present sequence represents the human microsatellite repeat M2_3_3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ds; HLA-related research; HLA class II-associated disease; transplantation matching; recombination hot spot identific linkage disequilibrium study; human; microsatellite.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New oligonucleotide primer capable of specifically hybridizing to a DN having the sequence of the flanking regions of a microsatellite (e.g. M249), useful for HLA-related research, e.g. transplantation matching.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human microsatellite repeat M2_3_3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ADA27359 standard;

```
The sequence depicts a HIV viral duplex sequence which contains a purine-
rich region concentrated on one chain of the duplex. The sequence may be
prepd. by standard DNA synthesis. The HIV duplex sequence is used as a
target for novel oligomers which are capable of forming a triplex at
three such oligomers HIV141 -HIV143 are capable of forming a triplex with
this sequence. The oligomers are used in the diagnosis and therapy of HIV
infection. Similar oligomers may be used to target viral DNA duplexes
specific for hepatitis, herpes and malignancy. The triple helices form
under mild conditions thus assays may be carried out without subjecting
the test specimen to harsh conditions. The oligomer is able to inhibit
gene expression, as verified by in vitro systems See also AAQ25452-25501
and AAQ30226-448. (Updated on 25-MAR-2003 to correct PN field.)

Composition for decreasing gene transcription - co oligo:nucleotide or deriv. complementary to target get gene re region

Claim 12; Page 43; 71pp; English.

The Erb-B2 gene has a purine rich segment symmetry. This sequence, derived from the with substantial mirror Erb-B2 gene is located 69

នួននួននួននេះ នួននួន

potential site of H-DNA formation. The overexpression of Erb-B2 is particularly associated with breast cancer. This triplex forming oligonucleotide directed against Erb-B2 and its derivatives may be used in the treatment of breast cancer, erythroleukaemia and sarcoma and more generally any disease involving the expression of Erb-B2. (Updated on 25-MAR-2003 to correct PN field.)

nucleotides upstream of the transcriptional start site and is

                                                                                                                                                                                                                                                                                 The present sequence is a PCR primer used during the identification of the murine confluency regulated adhesion molecule 2 (CRAM-2, also known as JAM-3) coding sequence. CRAM-2 is one of the vascular adhesion proteins of the immunoglobulin superfamily (Ig Sf). The CRAM-2 protein and coding sequence can be used in the treatment of cancer, inflammation, to doublate cell-cell interactions and angiogenesis, and in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Isolated human Confluency Regulated Adhesion Molecule 1 or 2 (CRAM-1 CRAM-2) polypeptide, useful for treatment of tumors, inflammation reactions and modulating vascular permeability.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 16 BP; 1 A; 10 C; 0 G; 5 T; 0 U;

                                                                The present sequence is a PCR primer used to determine the amount of murine confluency regulated adhesion molecule 1 (CRAM-1, also known JAM-2) mRNA following assays differing in confluency. CRAM-1 is one the vascular adhesion proteins of the immunoglobulin superfamily (Ig The CRAM-1 protein and coding sequence can be used in the treatment cancer, inflammation, to modulate cell-cell interactions and angiogenesis, and in the modulation of wound healing
                                                                                                                                                                                                                                                                                                                                                                                                                                                 Isolated human Confluency Regulated Adhesion Molecule 1 or 2 (CRAM-1 CRAM-2) polypeptide, useful for treatment of tumors, inflammation reactions and modulating vascular permeability.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Immunoglobulin superfamily; Ig Sf; vascular adhesion molecule; inflammation; cancer; wound; angiogenesis; mouse; JAM-2; confluency regulated adhesion molecule 1; CRAM-1; PCR primer; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Murine CRAM-1 mRNA transcript level

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention describes novel oligonucleotide primers or peptide nucleic acid (PNA) oligomers for detecting single nucleotide polymorphisms (SNP) and cytosine methylation status in chemically pretreated genomic DNA. The cligonucleotides are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, gastrointestinal, respiratory, central nervous system, cardiovascular and metabolic disorders. The oligomers are also used for detecting cell type differentiation. ABC00010-ABC9989, ABF00010-ABF9989, ABH00010-ABH9989 and ABT00010-ABI82073 represent the oligomers described in the invention. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from WIPO at
           WPI; 2001-657177/75

The oligonucleotides are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, gastrointestinal, respiratory, central nervous system, cardiovascular and metabolic disorders. The oligomers are also used for detecting cell type differentiation. ABC00010 ABC9989, ABF00010-ABF9989, ABH00010-ABH9989 and ABI00010-ABH82073 represent the oligomers described in the invention. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from WIPO at ftp.wipo.int/pub/published_pct_sequences

```

Detecting a target using an addressable array of probes linked to substrate and observing the binding pattern is useful to determine

determine

single

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to evaluating the presence of a target in an analyte, using an addressable array of probes linked to a substrate. The method comprises preparing a solution consisting of a buffer, target nucleic acid, DNA polymerase, deoxynucleotides and polynucleotide primers, then exposing the solution to the array so that the target hybridises, extending the bound probes, and observing a binding pattern on the array. The method is used to detect SNP's (single nucleotide polymorphisms) in diagnostic, screening, and gene expression analysis. The current sequence represents an SNP detection probe following target being a supplied of the surrent sequence represents an SNP detection probe following target being the surrent sequence represents an SNP detection probe following target

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to evaluating the presence of a target in an analyte, using an addressable array of probes linked to a substrate. The method comprises preparing a solution consisting of a buffer, target nucleic acid, DNA polymerase, deoxynucleotides and polynucleotide primers, then exposing the solution to the array so that the target hybridises, extending the bound probes, and observing a binding pattern on the array. The method is used to detect SNP's (single nucleotide polymorphisms) in diagnostic, screening, and gene expression analysis. The current sequence represents a nucleotide fragment representing an SN detection target. The SNP located at position 7 of the fragment may be detected by a probe in the method of the invention
                                                                        Detecting a target using an addressable array of probes linked to a substrate and observing the binding pattern is useful to determine a nucleotide polymorphisms in diagnostic, screening, and gene expressions.
                                                                                                                              WPI;
                                                                                                                                                                                                                                 08-OCT-2001;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                method comprises preparing a solution consisting of a buffer, target nucleic acid, DNA polymerase, decoxynuclectides and polymucleotide primers, then exposing the solution to the array so that the target hybridises, extending the bound probes, and observing a binding pattern on the array. The method is used to detect SNP's (single nucleotide polymorphisms) in diagnostic, screening, and gene expression analysis. The current sequence represents a polynucleotide primer following extension of the probe sequence. This primer may comprise one or more labels that may provide a means for measuring the levels of extended DNI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  02-OCT-1997;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  0
```

A method has been developed for the identification of a nucleic acid capable of modulating a process in a biological system. The method comprises: (a) introducing into the system a random library of nucle:

nucleic

muscular

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC acid catalysts (NAC) having a substrate binding domain (SBD), comprising CC a random sequence, and a catalytic domain (CD), and (b) identifying NAC CC in systems where modulation has occurred and/or determining the sequence CC of at least part of the SBDs in such systems. Nucleic acid molecules with CC endonuclease activity and catalytic activity, from the present invention, CC are used to modulate gene expression in plant and mammalian cells and to CC cleave target nucleic acid, particularly for treating systemic diseases CC caused by specific RNA, e.g. cancer, inflammation, psoriasis, non-hepatic ascites and infection. They may also be used to detect genetic drift and CC mutations in diseased cells and to determine c-raf RNA. Specifically NACs CC with RNA-cleaving activity that modulate expression of the Raf gene, are used to treat cancer, restenosis, psoriasis or rhoumatoid arthritis, or CC generally any condition associated with the level of c-raf. Introduction CC of sugar/phosphate modifications in creases stability against nuclease and CC activity. AAV90922 to AAV93877 represent NACs that can be used in the CC method, specifically for modulating the expression of a Raf gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

AAXO9121-X10268 are allele-specific oligonucleotide primers used in the isolation of various biallelic polymorphic markers found in the human genome (represented in AAX10269-X12937). These primers can be used in a method for determining polymorphic forms in an individual for use in e.9 forensics, paternity testing or for phenotypic typing for diseases such as agammaglobulinemia, disbetes insipidus, Lesch-Nyhan syndrome, musculi dystrophy, Wiskott-Aldrich syndrome, Fabry's disease, familial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Homo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                   New isolated nucleic acid segments from the human genome determining polymorphic forms for use in e.g. forensics, testing or phenotypic typing for disease.

The invention relates to genotyping/haplotyping the cholinergic receptor, CC micotinic, beta-polypeptide 2 (neuronal) (CHRNB2) gene of an individual, CC comprising determining for the two copies of the CHRNB2 gene present in CC the individual, the identity of the nucleotide pair at one or more CC polymorphic sites selected from PSI-24. Also include are oligonucleotides CC variants of CHRNB2. The method is useful for detecting novel CHRNB2 CC polymorphisms and for determining if an individual has a haplotype or CC polymorphisms and for determining if an individual has a haplotype or CC polymorphisms and for treating a specific condition or disease predicted to be associated with CHRNB2 activity (e.g. a memory disorder, Alzheimer's CC disease, epilepsy, a learning disorder, schizophrenia, attention CC defictlyhyperactivity disorder, Albab) and autosomal dominant nocturnal frontal lobe epilepsy (ADNFLE)), and in the design of clinical trials of candidate drugs for treating a specific condition or disease predicted to be associated with CHRNB2 activity. The method is useful to screen for CC compounds targeting CHRNB2 to treat a specific conditions or disease predicted to be associated with CHRNB2 activity. The method is useful to screen for CC cassociated with CHRNB2 activity. The present sequence is an CC CHRNB2 gene is located on chromosome lq21. The present sequence is an CC chrnb2 gene is located on chromosome lq21. The present sequence is an method of the invention

                                                                                                                                                                                                                                                                                     oligonucleotides of the present invention (see AAF45151 and AAF45153-F45161). The method is useful for ameliorating the effects of psoriasis, ichthyosis, pityriasis, ruba, pilaris, serborrhoea, keloids, keratosis, neoplasias, scleroderma, warts, benign growths, cancers of the skin, a hyperneovascular condition such as a neovascular condition of the retina, brain or skin, growth factor-mediated malignancies, other sclerotic disease, kidney disease, hyperproliferation of the inside of blood vessels or any other hyperplasia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Antisense therapy; antiproliferative; antiinflammatory; antipsoriatic; cytostatic; dermatological; cardiant; virucide; ophthalmological; keloid; skin disorder; Insulin-like Growth Factor 1 receptor; IGF-1; pityriasis; IGF binding protein; IGFBP-2; IGFBP3; Inflammation; psoriasis; pilaris; growth factor mediated cell proliferation; ichthyosis; serborrhoea; ruba; keratosis; neoplasia; scleroderma; wart; skin cancer; sclerotic disease; hyperneovascular condition; hyperplasia; kidney disease; neovascular condition of the retina; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to a method for ameliorating the effects of skin disorders. The method comprises contacting the skin with an antisense oligonuclectide, (for Insulin-like Growth Factor [IGF]-1 receptor, IGF binding protein [IGFBP]-2 or IGFBP3), which is capable of inhibiting or reducing growth factor mediated cell proliferation, inflammation and/or other disorders. The present sequence is an oligonucleotide which can be used to design the antisense
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ameliorating the effects of a disorder, e.g. psoriasis, by administering UV (ultra-violet) treatment (optional) and an antisense nucleic acid that inhibits or reduces growth factor mediated cell proliferation and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Wraight
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         21-JUN-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               21-JUN-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            28-DEC-2000

                                                                                                                                                             oligonuclectides of the present invention (see AAF45151 and AAF45153-F45161). The method is useful for ameliorating the effects of psoriasis, ichthyosis, pityriasis, rubs, pilaris, serborrhoea, keloids, keratosis, neoplasias, scleroderma, warts, benign growths, cancers of the skin, a hyperneovascular condition such as a neovascular condition of the retina, brain or skin, growth factor-mediated malignancies, other sclerotic disease, kidney disease, hyperproliferation of the inside of blood vessels or any other hyperplasia
                                                                                                                                                                                                                                                                                                  skin disorders. The method comprises contacting the skin with an antisense oligonuclectide, (for Insulin-like Growth Factor [IGF]-1 receptor, IGF binding protein [IGFBP]-2 or IGFBP), which is capable inhibiting or reducing growth factor mediated cell proliferation, inflammation and/or other disorders. The present sequence is an oligonuclectide which can be used to design the antisense
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           IGF binding protein; IGFBP-2; IGFBP3; inflammation; psoriasis; pilaris; growth factor mediated cell proliferation; ichthyosis; serborrhoea; ruba; keratosis; neoplasia; scleroderma; wart; skin cancer; sclerotic disease; hyperneovascular condition; hyperplasia; kidney disease; neovascular condition of the retina; ss.

                                                                                                                                                                                              δ
                                                                                                                                                                                                                                                                                                               The present invention relates to a method for ameliorating the effects of cskin disorders. The method comprises contacting the skin with an cc antisense oligonucleotide, (for Insulin-like Growth Factor [IGF]-1 cc antisense oligonucleotide, (for Insulin-like Growth Factor [IGF]-1 cc inhibiting or reducing growth factor mediated cell proliferation, cc inflammation and/or other disorders. The present sequence is an coligonucleotide which can be used to design the antisense oligonucleotide which can be used to design the antisense coligonucleotides of the present invention (see AAF45151 and AAF45153-cc oligonucleotides of the present invention (see AAF45151 and AAF45153-cc ichthyosis, pityriasis, ruba, pilaris, serborrheea, keloids, keratosis, cc neoplasias, scleroderma, warts, benign growths, cancers of the skin, a complasias, scleroderma, warts, benign growths, cancers of the skin, a chyperneovascular condition of the retina, brain or skin, growth factor-mediated mallynancies, other sclerotic condisease, kidney disease, hyperproliferation of the inside of blood

Ameliorating the effects of a disorder, e.g. psoriasis, by administering UV (ultra-violet) treatment (optional) and an antisense nucleic acid that inhibits or reduces growth factor mediated cell proliferation and/or

Example 7; Page 55; 201pp; English.

The present invention relates to a method for ameliorating the effects of cskin disorders. The method comprises contacting the skin with an cantisense oligonucleotide, (for Insulin-like Growth Factor [IGF]-1 CC receptor, IGF binding protein [IGFs]-2 or IGFS93), which is capable of cinhibiting or reducing growth factor mediated cell proliferation, CC inflammation and/or other disorders. The present sequence is an CC oligonucleotide which can be used to design the antisense coligonucleotide which can be used to design the antisense coligonucleotide which can be used to design the affects of psoriasis, CC oligonucleotides of the present invention (see AAP45151 and AAF48153-cc inchipyosis, pityriasis, ruba, pilaris, serborrhoea, keloids, keratosis, CC inchipyosis, pityriasis, ruba, pilaris, serborrhoea, keloids, keratosis, CC neoplasias, scleroderma, warts, benign growths, cancers of the skin, a cc brain or skin, growth factor-mediated malignancies, other sclerotic cc disease, kidney disease, hyperproliferation of the inside of blood cc vessels or any other hyperplasia

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          skin disorders. The method comprises contacting the skin with an antisense oligonucleotide, (for Insulin-like Growth Factor [IGF]-1 receptor, IGF binding protein [IGFBP]-2 or IGFBP], which is capable of inhibiting or reducing growth factor mediated cell proliferation, inflammation and/or other disorders. The present sequence is an oligonucleotide which can be used to design the antisense oligonucleotides of the present invention (see AAF45151 and AAF45153-1451). The method is useful for ameliorating the effects of psoriasis, ichthyosis, pityriasis, ruba, pilaris, serborrhoea, keloids, keratosis, neoplasias, scleroderma, warts, benign growths, cancers of the skin, a hyperneovascular condition such as a neovascular condition of the retina, brain or skin, growth factor-mediated malignancies, other sclerotic disease, kidney disease, hyperproliferation of the inside of blood vessels or any other hyperplasia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ameliorating the effects of a disorder, e.g. psoriasis, by administering UV (ultra-violet) treatment (optional) and an antisense nucleic acid tha inhibits or reduces growth factor mediated cell proliferation and/or

skin disorders. The method comprises contacting the skin with an antisense oligonuclectide, (for Insulin-like Growth Factor [IGF]-1 receptor, IGF binding protein [IGFBB]-2 or IGFBB3), which is capable of inhibiting or reducing growth factor mediated cell proliferation, inflammation and/or other disorders. The present sequence is an oligonucleotide which can be used to design the antisense oligonucleotide which can be used to design the antisense oligonucleotide of the present invention (see AAF45151 and AAF45153-01igonucleotides of the spresent invention (see AAF45151 and AAF45153-01igonucleotides), ruba, pilaris, serborrhoea, keloids, keratosis, ichthyosis, pityriasis, ruba, pilaris, serborrhoea, keloids, keratosis, ichthyosis, pityriasis, ruba, pilaris, serborrhoea, keloids, keratosis, aneoplasias, scleroderma, warts, bering growths, cancers of the skin, a hyperneovascular condition such as a neovascular condition of the retina brain or skin, growth factor-mediated malignancies, other sclerotic disease, kidney disease, hyperproliferation of the inside of blood
                                                                                                                                                                                                                                                                                                                     The present invention relates to a method for ameliorating the skin disorders. The method comprises contacting the skin with a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to a method for ameliorating the effects of skin disorders. The method comprises contacting the skin with an antisense oligonucleotide, (for insulin-like Growth Factor [IGF]-1 receptor, IGF binding protein [IGFBP]-2 or IGFBP3), which is capable of inhibiting or reducing growth factor mediated cell proliferation, inflammation and/or other disorders. The present sequence is an oligonucleotide which can be used to design the antisense oligonucleotides of the present invention (see ARP45151 and ARP45153-G150). The method is useful for ameliorating the effects of psoriasis, ichthyosis, pityriasis, ruba, pilaris, serborrhoea, keloids, keratosis, neoplasias, scleroderma, warts, benign growths, cancers of the skin, a hyperneovascular condition such as a neovascular condition of the retina, brain or skin, growth factor-mediated malignancies, other sclerotic disease, kinney disease, hyperproliferation of the inside of blood
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ameliorating the effects of a disorder, e.g. psoriasis, by administering UV (ultra-violet) treatment (optional) and an antisense nucleic acid tha inhibits or reduces growth factor mediated cell proliferation and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Wraight CJ,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Example 8; Page 86; 201pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      21-JUN-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               oligonuclectides of the present invention (see AAF45151 and AAF45153-F45161). The method is useful for ameliorating the effects of psoriasis, ichthyosis, pityriasis, ruba, pilaris, serborrhoea, keloids, keratosis, neoplasias, scleroderma, warts, benign growths, cancers of the skin, a hyperneovascular condition such as a neovascular condition of the retina, brain or skin, growth factor-mediated malignancies, other sclerotic disease, kidney disease, hyperproliferation of the inside of blood
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 skin disorders. The method comprises contacting the skin with an antisense oligonuclectide, (for Insulin-like Growth Factor [IGF]-1 receptor, IGF binding protein [IGFBP]-2 or IGFBP), which is capable inhibiting or reducing growth factor mediated cell proliferation, inflammation and/or other disorders. The present sequence is an oligonuclectide which can be used to design the antisense oligonuclectide which can be used to design the antisense oligonuclectide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human immunodeficiency virus; HIV; reverse transcriptase; RT detection; mutation; anti-HIV drug resistance; polymorphism;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              HIV-1 reverse transcriptase mutation detection probe
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            31-JAN-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ABZ34164 standard; DNA; 15

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes a method for detecting mutations CC associated with anti-HIV drug resistance in a patient by detecting at C least one of the mutations K103N/R, V106A/I/L, V18EC/I, M18EV/I Y18EL, CC G199A/S/R, T215Y/F/D/S/A and/or Q151M/L in the reverse transcriptase (RT) CC of HIV strains in a biological sample using a specific set of probes CC optimised to function together in a reverse-hybridisation assay. The method and the nucleic acid sequences used in the method are useful for CC determining viral mutations and/or polymorphisms in the HIV RT gene associated with resistance. The probes are useful for CC detection, preferably in vitro detection of the mutations K103N/R, V106A/I/L, V138IC, Q15IM/L, M184VI, Y18BL, G199A/S/R and/or V106A/I/L, V138IC, I, Q15IM/L, M184VI, Y18BL, G199A/S/R and/or CC 1215Y/F/D/S/A in the RT of HIV strains in a biological sample, where the mutation is associated with anti-HIV drug resistance. The method provides a rapid, reliable and precise assay or determination and monitoring of CC antiviral drug resistance or mutations associated with drug resistance of viruses containing RT genes. ABZ33759 to ABZ34642 represent HIV RT sequences and probes which are used in the exemplification of the present of the present.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

```
CC nuclectide sequence which is a polymorphic variant of a reference consequence for the aldehyde dehydrogenase 5 family, member A1 (succinate-semialdehyde dehydrogenase) (ALDH5A1) gene or its fragment. The comparising a sequence for the aldehyde dehydrogenase) (ALDH5A1) gene or its fragment. The comparison of the ALDH5A1 polymorphic variant with a candidate agent and assaying for binding activity. The polypeptide and haplotypes are useful for contentifying an association between a trait such as a clinical response to a drug targeting ALDH5A1 and a haplotype ALDH5A1 isogenes in vivo, are also useful for studying expression of the ALDH5A1 isogenes in vivo, for in vivo screening and testing of drugs against ALDH5A1 protein and compounds for 4-flydroxybutyric aciduria and metabolic diseases in a biological system. CC Antibodies are useful for immunoprecipitating the polypeptide from solution, for detecting ALDH5A1 protein isoforms in biological samples, immunohistochemical and immunofluorescence techniques. The polynucleotide is useful for gene therapy and antisense gene therapy. This sequence is colymorphisms in the ALDH5A1 gene described in the method of the colymorphisms in the ALDH5A1 gene described in the method of the colymorphisms in the ALDH5A1 gene described in the method of the colymorphisms in the ALDH5A1 gene described in the method of the colymorphisms in the ALDH5A1 gene described in the method of the colymorphisms in the ALDH5A1 gene described in the method of the colymorphisms in the ALDH5A1 gene described in the method of the colymorphisms in the ALDH5A1 gene described in the method of the colymorphisms in the ALDH5A1 gene described in the method of the colymorphisms in the ALDH5A1 gene described in the method of the colymorphic colymorphic colymorphic colymorphisms in the ALDH5A1 gene described in the method of the colymorphic coly

CC The invention relates to an isolated polynucleotide comprising a sequence CC selected from a polymorphic variant of calmodulin 1 (CALMI). The CP colymorphic variant comprises an CALMI isogene defined by a haplotype CC selected from haplotypes 1-21 given in the specification. The polymorphisms are useful for studying the biological function of CALMI as CC well as in identifying drugs targeting this protein for the treatment of CC well as in identifying drugs targeting this protein for the treatment of CC adisorder related to its abnormal expression or function. The CC polymorphic variants may also be used in screening for compounds CC targeting CALMI to treat a specific condition or disease predicted to be associated with CALMI activity. Establishing CALMI haplotype or haplotype CC pair of an individual is useful for improving the efficiency and CC reliability of several steps in the discovery and development of drugs for treating diseases associated with SCYA3 activity, e.g. Alzheimer's CC disease and diseases involving defects in calcium-dependent signal CC transduction. Haplotyping the CALMI gene in an individual is also useful CC in the design of clinical trials of candidate drugs for treating a composition or disease predicted to be associated with CALMI activity. Asy55892-Asy59018 represent human CALMI allele-specific coligonucleotides and PCR primers of the invention

CC least one of the mutations K103N/R, V106A/I/L, Y181C/I, M184V/I, Y188L, CC G199A/S/R, T215Y/F/D/S/A and/or Q151M/L in the reverse transcriptase (RT) CC of HIV strains in a biological sample using a specific set of probes CC optimised to function together in a reverse-hybridisation assay. The method and the nucleic acid sequences used in the method are useful for CC determining viral mutations and/or polymorphisms in the HIV RT gene CC associated with resistance. The probes are useful for the genetic detection, preferably in vitro detection of the mutations K103N/R, CC V106A/I/L, Y181C/I, Q151M/L, M184V/I, Y188L, G190A/S/R and/or CC V105A/I/L, Y181C/I, Q151M/L, M184V/I, Y188L, G190A/S/R and/or CC T215Y/F/D/S/A in the RT of HIV strains in a biological sample, where the CC mutation is associated with anti-HIV drug resistance. The method provides CC a rapid, reliable and precise assay or determination and monitoring of CC viruses containing RT genes. ABZ33759 to ABZ34642 represent HIV RT conventions and probes which are used in the exemplification of the present of the present.

The present sequence is a PCR primer designed to bind to human matrix metalloproteinses (MMP) catalytic domain (CATR). This primer is used to illustrate the method of the
        AAT90621-650 represent recognition sequences found in the positive (-) strand of the Hepatitis C virus (HCV) RNA. The sequences are recognised by novel ribozymes which inhibit replication, infectivity or gene expression of HCV. The present sequence is located within the NS5 gene. Hairpin ribozymes of the present invention were designed based on
                                                                                                                                                                                                                                                                                                                                                                                     misc_feature

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           are directed against conserved regions of the genome and so should be active against many strains of HCV. The ribozymes, when optionally expressed from a vector, cleave the RNA of HCV and so are useful for treatment and prevention of HCV infection. They can also be used to detect HCV contamination of blood or for clinical diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human biallelic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAX09676

                                                                                                                                                        CC The present invention describes ribozymes (I) capable of inhibiting creplication, infectivity or gene expression of a hepatitis C virus (HCV), CC directed to target sequences AAA13438 to AAA13444, AAA13454 and AAA13465. CC (I) have virucide, hepatotropic and antiinflammatory activities. (I), or vectors comprising nucleotide sequences encoding (I), are useful for cells. (I) are useful for diagnosts, prevention and treatment of HCV cells. (I) are useful for preventing hepatitis C viral infection in a cells. (I) are useful for preventing hepatitis C viral infection in a cell. AAA13401 to AAA13405 represent examples of the briefest cell. AAA13401 to AAA13405 represent examples of the briefest comprisers used in the amplification of the HCV capsid sequence, AAA13408 to AAA13467 represent HCV hairpin ribozyme, AAA13408 and AAA13408 and AAA13407 represent holigonucleotides used in the construction of HCV hairpin ribozymes, all these sequences are used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SXX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RESULT 242
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            뭕
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 дb
                                                     is at risk of developing early-onset glaucoma comprising at least 1 (2) a kit for determining whether an individual is at risk of developing glaucoma with a high intraocular pressure at onset of disease, comprising at least 1 reagent that can be used to detect an ApoB4 allele in the individual; and/or at least 1 reagent that can be used to detect an ApoB4 allele in the individual, and/or at least 1 reagent that can be used to detect a T allele in the ApoB5 gene promoter. Identification of increased risk of glaucoma enables better treatment planning for affected individuals as well as for other family members who may be the affected individuals or disease gene carriers. The method provides a better and earlier means of diagnosis, so that preventative or palliative measures can be taken before significant damage to the optical nerve occurs
                                                                                                                                                                                                                                                                                                                                                                                                                                                              (TIGR) gene, or in TIGR gene promoter. The method comprises assessing the apolipoprotein E (ApoE) allele, or allele of the ApoE gene promoter. The invention also describes (1) a kit for determining whether an individual
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention describes a novel method for assessing the risk for developing early-onset glaucoma and for developing glaucoma with a intraocular pressure at the onset of disease in an individual havin mutation in a trabecular meshwork inducible glucocorticoid response
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Assessing the risk of an individual for developing early-onset glaucoma, comprises assessing Apolipoprotein E alleles carrying a trabecular meshwork inducible glucocorticoid response gene mutation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (INRM )
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ApoE; early-onset glaucoma; intraocular; TIGR; promoter; ApoE4; trabecular meshwork inducible glucocorticoid response; apolipoprotein treatment; diagnosis; probe; ss.

                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                              S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to oligonucleotides based on nucleotide sequences obtained from both wild-type tubercle bacilli (wtTB) that are consistent to a drug and mutant-type tubercle bacilli (mtTB) that are resistant to a drug. The drugs used in the present invention are creaistant to a drug. The drugs used in the present invention are creaistant to a drug. The drugs used in the present invention are creamburol (EB). The typeB gene is responsible for resistance to RFP; the crrs gene is responsible for resistance to SM and KM; the rpst gene is responsible for resistance to INH; the katG gene is responsible for resistance to INH; the katG gene is responsible for resistance to INH; cand the embB gene is responsible for resistance to EB. The present convention also relates to nucleic acid probes having part of a nucleotide sequence of tubercle bacilli (TB) responsible for drug resistance and convention can be used to enable the differentiation of drug resistance and the present invention can be used to enable the differentiation of drug resistance and the determination of infection with tubercle bacilli
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Best Loc
